

How To: Enter Weaning Data

Entering weaning data for your herd on the American Wagyu Association Registry Service is easy to do by following a few simple steps and is a process similar to entering yearling data.

Accessing the member login

The member login can be accessed from the Wagyu home page by clicking on the banner that says Herd Management.

- Go to www.wagyu.org using any Internet browser.
- Click on Herd Management in the upper banner of the Wagyu home page or go to wagyu.digitalbeef.com
- The member login is located in the upper left hand side of the Registry Service screen. Enter your User Name and Password.

Adding animals to weaning work queue

Using the Work Menu navigation on the left hand side of the screen, click on View under My Account. Under the General Profile Information screen, click on the Herd tab.

The first step to enter weaning information is to put the animals in the Weaning Work Queue. First check if you have any animals already in the Weaning Work Queue. You may have added animals into the weaning work queue if you clicked "Add to weaning queue" after you entered the birth data. If there is no work in the weaning queue, you will need to add animals to the Weaning Work Queue.

- In the series of boxes running across the middle of the screen. Identify the Bulls:: Pre-Wean box and the Females:: Pre-Wean box. Clicking on either of these boxes will bring up a listing of all bulls or females in your inventory that are under 251 days of age and do not have a weaning record entered.
- In the Wean column, click on the Wean box next to each calf you wish to enter weaning data for, which puts that animal in the Weaning Work Queue. Do this for all the bulls and females you want to enter weaning data for. If the animal does not have a box in the Wean column it means this animal is less than 100 days of age.

Error Descriptors:

- Registration # cannot be located. Please verify that the registration number is complete and correct.
- Animal already has a weaning record. Updates for these animals are not possible thru this screen.
- Changes the animal from a male-to-female or female-to-male.
- Critical Out-of-Range (prevents records from being committed to registry):**
 - Date: The date cannot be AFTER today (or missing).
 - Date: The date cannot be greater than 365 days from birth.
 - Date: The date cannot be before the birth date.
 - Weight: Must have a valid weight.
 - Hip Height: Valid measurements are between 20 and 60.
 - Dam Hip Height: Valid measurements are between 35 and 60.

- For animals less than 100 days of age, go to Herd Mgmt/Recording/Weaning, enter the number of animals to be entered, click Continue and follow the "Entering Weaning Data" steps.

Weaning Data Entry Screen for Work Order #1807030001 Member #2239 - OVERSEAS BREEDER (1 records)

Error Descriptors	Reg No	Name	Prefix Tattoo	Sex	Weaning Date	Age	Weight	Adj	Temper	Height	Premise/Pasture	Mgmt	Feed	EID
						0		N/A						

Add row Validate

Error Descriptors:

- Registration # cannot be located. Please verify that the registration number is complete and correct.
- Animal already has a weaning record. Updates for these animals are not possible thru this screen.
- Changes the animal from a male-to-female or female-to-male.
- Critical Out-of-Range (prevents records from being committed to registry):**
 - Date: The date cannot be AFTER today (or missing).
 - Date: The date cannot be greater than 365 days from birth.
 - Date: The date cannot be before the birth date.
 - Weight: Must have a valid weight.
 - Hip Height: Valid measurements are between 20 and 60.
 - Dam Hip Height: Valid measurements are between 35 and 60.

- In the weaning data entry screen, enter available information: weaning date, weight; temper; height, management information. Plus, you can enter dam information including: status, weight, height and body condition. Clicking on the Helpful Tips box in the upper right corner will bring up a dialog box with a description of what needs to be entered into that column.
- If you have a calf in your work queue that you do not have data for you can delete that animal from the work queue by clicking on the red X at the right-most column of the screen. That animal is removed and weaning data can be entered later.

Validate and commit

- Once all data is entered, click the Validate button located below the last calf data line. You must click Validate before leaving this screen, otherwise all the data entered will be lost.
- The validation process checks the data entered for any errors. If there are no errors that show up, click the Commit button. This commits the data to the registry. This is a two-step process – first you Validate the data to check for errors, then you Commit the data to the registry.
 - If there are any errors, an error descriptor will be displayed on the left of the screen in the row where there is an error, representing the type of error that is explained at the bottom of the screen. The field that contains the error will also be highlighted in either yellow or red.
 - If the box is highlighted yellow, this means it is an advisory error and may be out of the normal range but may still be committed to the Registry.
 - If the error is highlighted red, this means the error is critical and cannot be committed to the Registry Service at this time.
 - Correct as many errors as possible, and then click Validate again.
 - Next, click the Commit button. Any animal that still has an error will remain in the kickout queue to be fixed at a later time. The kickouts can be found on the General Profile Information screen by clicking on View under the My Account menu, and then clicking on the Kickouts tab. Clicking on the work order number will bring up the animals with errors. Contact the AWA for assistance in correcting remaining errors.
 - Once you commit the weaning data with no errors, the weaning date will show up in the wean column of the general profile information screen under the weaned section of the herd tab.

Weaning data entry screen. Complete as much data as available, and then hit the Validate button. The validation process checks the data for errors. Correct the errors and hit the Validate button again. Next, click the Commit button, this commits the data to the registry. You must click both Validate and then Commit in order for the data to be processed.
